

Angelo Ragucci

347-466-0412 | aragucci05@gmail.com | US Citizen in Staten Island, NY | github.com/aragucci05-a11y

Education & Certificates

- B.S. in Information Systems with a concentration in Data Science from CUNY College of Staten Island, NY — Expected June 2027
- National Honor Society Member | Advanced Regents Diploma | AP Scholar

Projects

Data Analysis and Programming — Academic Projects

- Engineered a reinforcement learning pipeline using temporal-difference learning and deep neural networks to increase training efficiency by over 50% compared to Monte Carlo strategies.
- Tuned a Deep Q-Network (DQN) for LunarLander-v3 by optimizing ϵ -greedy exploration decay, learning rate, and replay buffer configuration to improve training stability and convergence speed.
- Engineered an API-based data pipeline for a planetary tracking web app, handling real-time astronomical API ingestion, JSON parsing, and feature extraction to convert raw ephemeris data into structured datasets for frontend visualization rendering.
- Analyzed structured datasets in Microsoft Excel using pivot tables, conditional formatting, and advanced formulas, producing data-driven visualizations and reports for academic presentations.

Custom PC Building and Consulting — Personal Projects

- Built and configured multiple custom desktop computers for clients by sourcing components, managing budgets, and benchmarking performance using diagnostics tools, resulting in ample profits.
- Deployed and managed locally hosted AI models using tools such as Ollama and LM Studio, configuring model parameters and GPU settings to run large language models on consumer-grade hardware in order to improve studying and programming workflows.
- Provided technical troubleshooting support by diagnosing issues, applying fixes, and effectively communicated project specifications to non-technical individuals in order to deepen the clients understanding.
- Optimized system performance by configuring BIOS, installing drivers, and administering a self-hosted home server with networking and storage configurations, resulting in stable infrastructure for users.

Other Experience

Part-Time Event Staff at A Taste of Honey Caterers, Staten Island, NY — January 2021 to Current

- Led crew coordination and logistics for large-scale events serving hundreds of guests, assigning tasks, managing timing, and maintaining service standards across both outdoor catering and formal indoor events including weddings and fundraisers.

Technical Skills

- Languages & Web: Python, C++, JavaScript, HTML, CSS, SQL
- Tools & Platforms: Pytorch, Git/Github, Microsoft Excel, Ollama, LM Studio, APIs, JSON, React, Django
- Systems & Hardware: Hardware Diagnostics, Networking, Machine Learning, Server Administration
